

1.1 Add Decoder

Decoder is used to decode the video signal transmitted by the transfer server. The decoding output is a standard video signal. The decoder is necessary for decoding videos on the TV wall.

Go to Home→Add, Edit or Delete Device→Decoder interface.

The setting steps of adding decoders are the same as adding encoding device setup (see Add Encoding Device for details).

➤ Create and Connect Decoder

The decoder which needs to be connected to the platform must be the master decoder and in platform mode. Login the web client of the decoder as shown below.

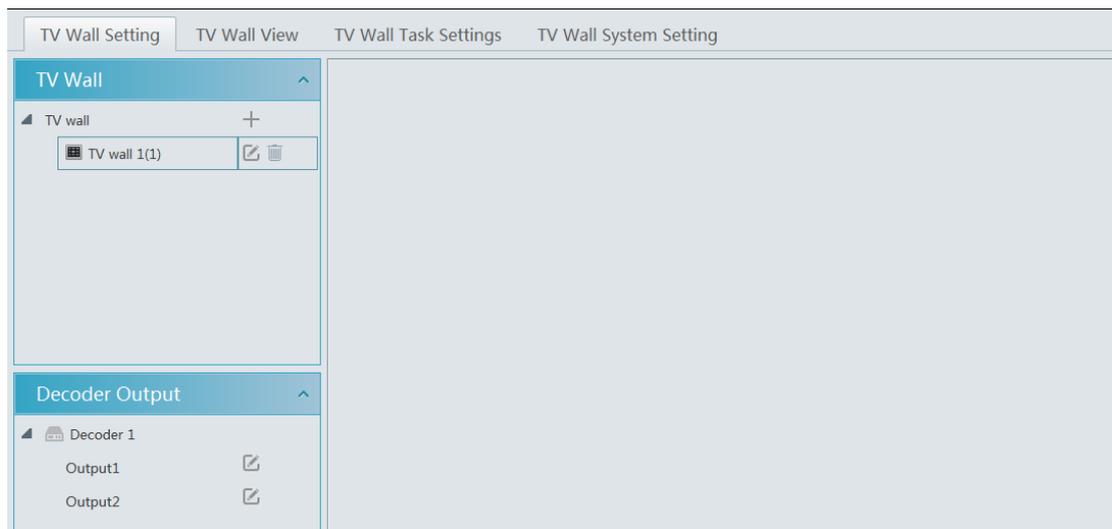

Go to Basic Settings→ System Settings to check the user permission and running mode of the decoder and make sure its user permission is master and its running mode is platform. Then apply the settings and restart the decoder.

Basic Settings	
Running Mode	Platform
User Permission	Master
Device Name	Decoder
MAC	00:18:AE:00:45:D1
Soft Version	2.1.0.12
Version Date	20181214
Kernel Version	I9F6-I9F6-I9F6
<button>Apply</button>	

The decoder will not be online until it is bound to a TV wall. Please create a TV wall first and then bind the decoder to the TV wall. See chapter 12.3.1 for details.

1.2 TV Wall Management

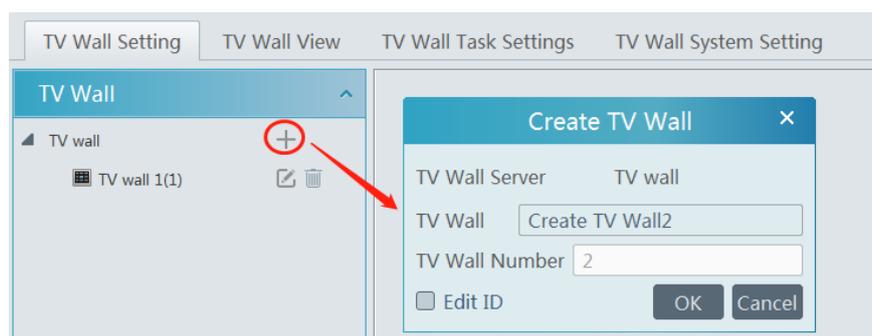

Go to Home→TV Wall Management→ TV Wall Setting.

1.2.1 TV Wall Settings

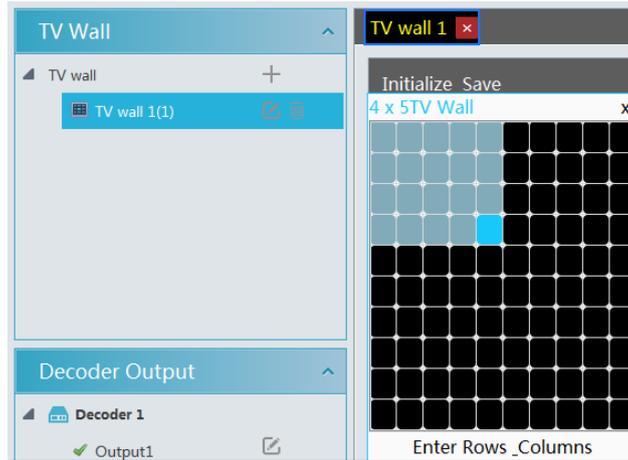

◆ Create TV Wall

Go to Home→TV Wall Management→Edit TV Wall. Select a TV wall server and then click  to create a TV wall.

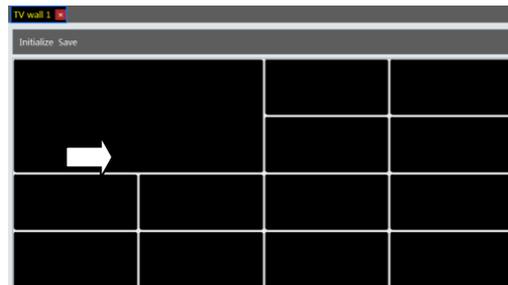

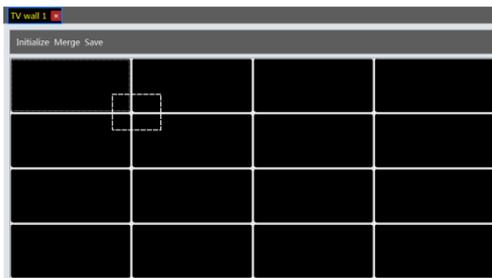

◆ Initializing

- ① Double click the created TV wall to prompt a TV wall window.
- ② Click “Initialize” to create TV wall layout.

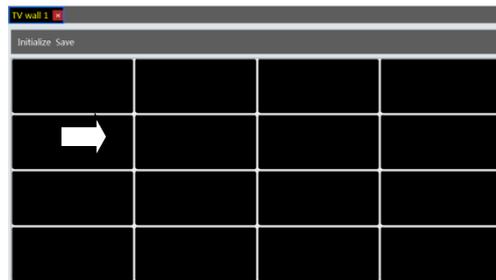

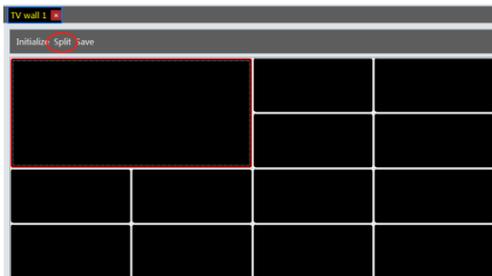

◆ **Merging\Splitting**

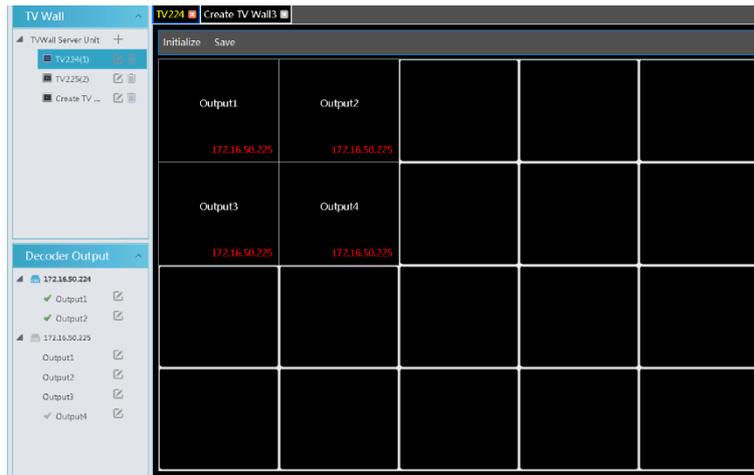

Merging: drag on the screen and then release. The “Merge” button will be shown. Click it to merger these small windows.

Splitting: select the merged window and click “Split” to restore the window to the previous status.

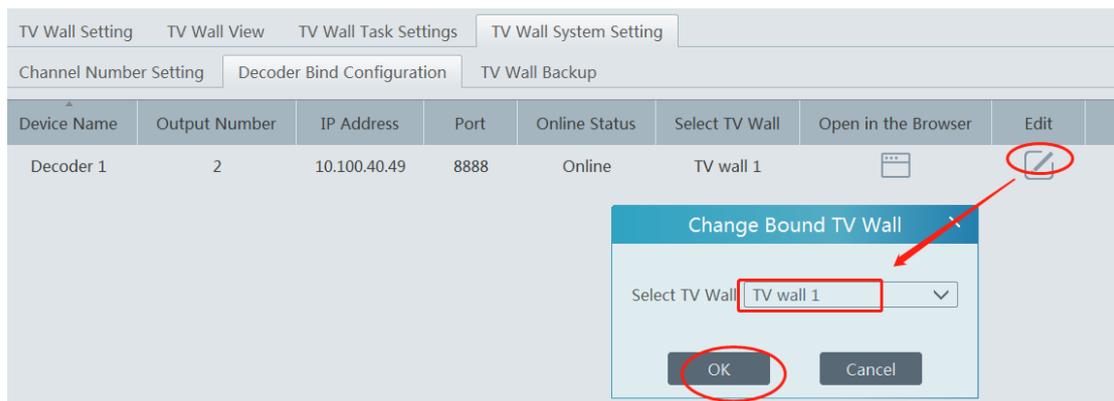

The online decoder displayed in the decoder output list is the binding decoder of this TV wall. Drag the outputs to windows on the right in sequence and then click “Save” to save the settings.

- **Decoder Binding**

Go to Home→TV Wall Management→TV Wall System Setting interface as shown below. In this interface, decoder bind can be set up.

Decoder bind configuration: modify the binding state between decoder and TV wall.

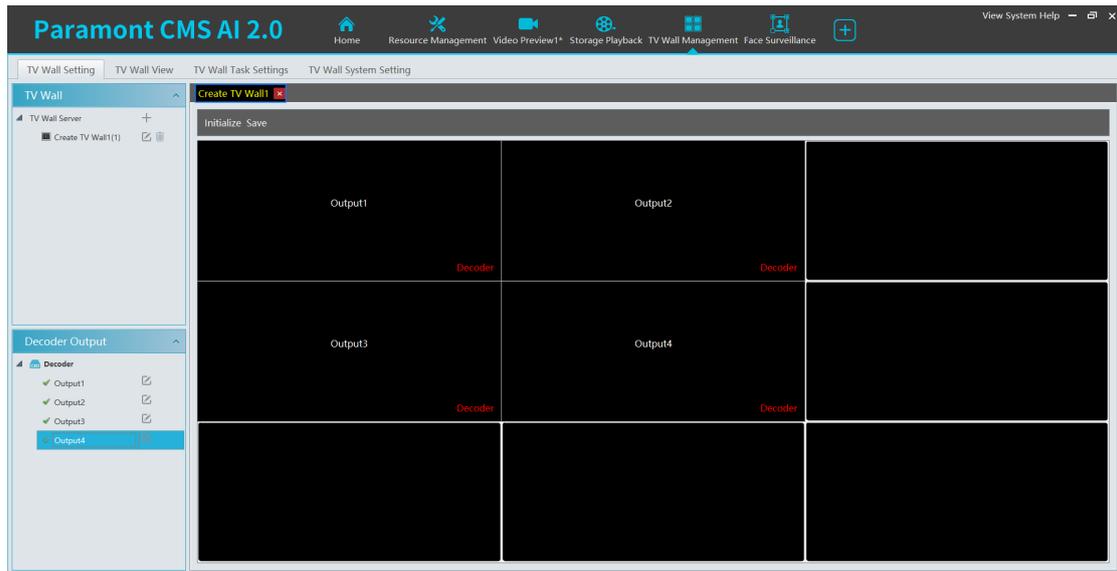

Click to change bound TV Wall. After the decoder is bound to the TV Wall, the online status will be “Online”.

Return to the decoder management interface as shown above. The online status of the decoder indicates that the decoder is successfully bound with TV wall. Go to TV Wall Setting interface as shown below. Drag the outputs of

the decoder to the window on the right and save them to complete output bind.

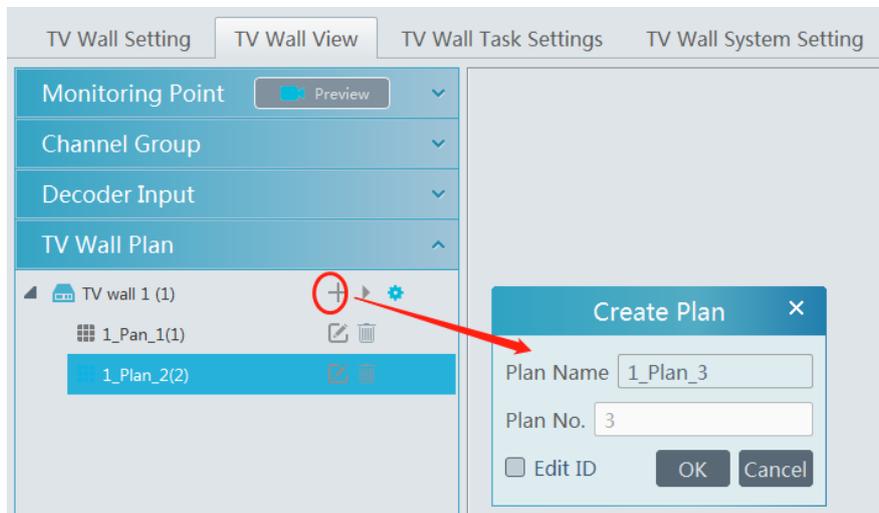

1.2.2 TV Wall View

◆ Create Plan

Go to Home → TV Wall Management → TV Wall View → TV Wall Plan.

Click  beside the TV wall name to create the TV wall plan name.

◆ Configure Plan

Double click the plan name to show the plan.

Drag the monitoring points to the corresponding window respectively to decode image. And double click the camera icon at the top-left corner. After bind channels to the different output monitor, then save the settings. Finally, check the preview of the TV Wall.
