

Paramont Series

How To Do an AI Search on The Paramount Application

1. Select the three dots in the lower right-hand corner then select "Search"

2. Select “Target Search” then select either Face/People/Vehicle (vehicle includes license plates) keep in mind you need a camera that supports the function you are trying to search for. These functions need to be setup via the AI/Event Section of your NVR to work properly they are not enabled by default please reference our other [videos/guides](#) on setting up this process. ***Text Search is a feature releasing with the new PN4A recorders ONLY.**
