

Vision Series

Setting up email notifications for the Vision Series with Gmail

**This guide will be utilizing the web GUI the only difference between here and the local monitor will be accessing main menu on the local monitor. You right click on the mouse button and click Main Menu, Network, Basic, Email across the top **

1. Select Setup, Network/Email and input your SMTP information

**Our email notifications system has been tested with Gmail and Yahoo so that is InVid's recommendation. Outlook does work, it requires port 587 and TLS, but you will need to ensure no firewall or security settings are blocking the sending, InVid Tech cannot troubleshoot.

You'll only need to enter it once so you don't need to remember Vou don't have any app passwords. Select the app and device you want to generate the app password for. Select app Select device Mail Calendar contacts You'Tube Other (Custom name)

5. Give the app a name, in this example we used InVidTech you can put whatever you want here it's just a label. Then click Generate.

6. Take your generated password and input this password into the "Password" field under Network/Email.

Generated app password	Your app password for your device
	nejw cwsl rzsw gegi
Email securesally@gmail.com Password	How to use it Go to the settings for your Ocogie Account in the application or device you are trying to set up. Replace your password with the 16- character password shown above. Just like your normal password, this app password grants complete access to your Google Account. You won't need to remember it, so don't write it down or share it with anyone.
	DONE

- 7. Test to Confirm
- 8. Defining email notifications. This photo below shows how to turn on for Motion, however you can turn on for most alarms, i.e. Motion, AI events, Video Loss and Exceptions
